

Introduction

- **Title:** Design a Menu Preview for Bakery
- **Author:** Rafid, UX Researcher . rafid@menubakery.design
- **Stakeholders:** Bakery.
- **Date:** 15/9/2023
- **Project background:** The bakery has identified a need to improve its menu presentation for customers, both in-store and online. Customers have expressed confusion and frustration in navigating the menu and making selections. This research aims to enhance the user experience by designing an intuitive and visually appealing menu preview.
- **Research goals:** Our research seeks to address the following design problems
 - Identify usability issues in the current menu presentation.
 - Understand customer preferences regarding menu layout and organisation.
 - Determine how an improved menu preview can increase customer satisfaction.
 - Provide actionable insights to guide the design of the bakery's menu presentation.

Research questions

1. **Navigation Usability:** How do users currently navigate the bakery's menu on the website, and what are the common pain points and difficulties they encounter?
2. **Menu Clarity:** Do users find the menu item names and descriptions clear, informative, and easy to understand, and if not, what improvements can be made?
3. **Visual Design Impact:** How does the visual design and layout of the menu preview affect user engagement and their likelihood to explore and make a purchase?
4. **Accessibility:** Is the menu preview accessible to users with diverse abilities, including those who may rely on screen readers or have other accessibility needs?
5. **Conversion Rate:** How does the redesigned menu preview impact user engagement and conversion rates, such as the percentage of users who complete a purchase?

Key Performance Indicators (KPIs)

- **Time on Task:** The average time customers spend browsing the menu
- **Order Completion Rate:** The percentage of customers who successfully place an order.
- **Customer Satisfaction Score (CSAT):** A rating of customer satisfaction with the menu design.
- **Menu Interaction Heatmap:** Visualising the areas of the menu that receive the most interaction

Methodology

Usability Testing:

- **Participants:** Usability testing sessions will be conducted with a diverse group of participants, including current users of the bakery's website and prospective users.
- **Tasks:** Participants will be given specific tasks to perform, such as finding a menu item or providing feedback on the menu's visual design.
- **Observation:** Sessions will be moderated to observe participant interactions, including mouse movements, clicks, and verbal comments.
- **Video Recording:** All sessions will be recorded to allow for later review and analysis.

Surveys:

- **Participants:** Participants from usability testing sessions will be asked to complete post-interaction surveys to gather quantitative data.
- **Questions:** Surveys will include questions about user satisfaction, perceived menu clarity, and likelihood of making a purchase.
- **Scalability:** Surveys will be designed to collect data from a larger sample of participants to complement qualitative findings from usability testing.

Accessibility Evaluation:

- **Tools:** Accessibility audits will be conducted using automated testing tools and manual evaluation to ensure compliance with guidelines.
- **Scenarios:** Specific scenarios, such as navigating the menu using a screen reader, will be simulated during the evaluation.
- **Issues Logging:** Any accessibility issues found will be documented for later analysis.

Analytics:

- **Data Source:** Website analytics data will be collected from the bakery's website, including user behaviour, conversion rates, and navigation patterns.
- **Comparison:** Analytics data before and after the menu preview redesign will be compared to assess the impact on user engagement.

Participants

Participants will include:

Current Users: Individuals who have interacted with the bakery's website in the past.

Prospective Users: Individuals who may be interested in using the bakery's online services.

Diverse Abilities: Participants with varying abilities assess accessibility.

Participants will be selected to ensure diversity in age, gender, and experience with the bakery's offerings.

Script

Introduction:

- Welcome, and thank the participant for their time.
- Explain the purpose of the study: to improve the menu preview on the bakery's website.
- Emphasise that their feedback is valuable and will help enhance the user experience.
- Mention that their actions and feedback will be recorded but that their personal information will remain confidential.
- Ask for their consent to proceed.

Pre-Test Questions:

1. Can you briefly describe your experience with using bakery websites for ordering or browsing menus online?
2. Have you ever used our bakery's website before? If so, how often?
3. Do you have any dietary restrictions or preferences that you would like us to be aware of?

Task 1: Initial Impressions

- Show the participant the current menu preview on the website.
- Ask them to share their initial impressions, thoughts, and feelings about the menu design.
- Prompt: "What are your first thoughts when you see this menu? Is it visually appealing?"

Task 2: Menu Navigation

- Instruct the participant to find a specific menu item (e.g., "Chocolate Chip Cookies") on the current menu.
- Observe their interactions and note any difficulties.
- Prompt: "Please find the 'Chocolate Chip Cookies' on the menu. Let me know when you're done."

Task 3: Menu Item Comprehension

- Show a menu item with a description (e.g., "Blueberry Muffin: A moist muffin with fresh blueberries").

- Ask the participant to describe what they understand about the item.
- Prompt: "Tell me what you think this menu item, 'Blueberry Muffin,' is about based on its description."

Task 4: Visual Design Feedback

- Present design mockups of the new menu preview.
- Ask the participant to provide feedback on the visual design and layout.
- Prompt: "Please share your thoughts on this redesigned menu. What do you like or dislike about the visual design?"

Task 5: Accessibility Evaluation

- Share a specific menu item and ask the participant how they would expect accessibility features (e.g., screen reader support) to work.
- Prompt: "Imagine you're using a screen reader. How would you expect it to read out the details of this menu item?"

Post-Test Questions: 4. On a scale of 1 to 10, how easy was it to find the 'Chocolate Chip Cookies' on the current menu? (1 being very difficult, 10 being very easy)

5. Did you encounter any issues or challenges while using the menu?
6. Are there any specific changes or improvements you would suggest for the menu design?
7. Did you find the menu item descriptions clear and informative?
8. How likely are you to make a purchase based on the menu preview you saw today? (1 being very unlikely, 10 being very likely)

Closing:

- Thank the participants for their valuable feedback.
- Let them know that their input will contribute to improving the bakery's website.
- Offer any compensation or incentives, if applicable.
- Inform them about the next steps in the research process.
